# NIEM IMPACT ON THE MISSING

NATIONAL INFORMATION EXCHANGE MODEL

NIEM.gov

**00:00:40**

A child goes missing every 40 SECONDS  
in the U.S., over 2,100 per day.

That translates to 800,000 kids missing each year—  
and another 500,000 go unreported.

44% of abducted and murdered children are found  
dead in less than an hour after abduction.

# NIEM IMPACT ON THE MISSING

**On January 13, 1996,  
Amber Hagerman, 9, was  
abducted near her home  
in Arlington, Texas.**

Neighbors and law enforcement worked together night and day to find Amber. They even had a lead on the abductor's vehicle.

**Four days later and four miles away,  
she was found dead.**

# NIEM IMPACT ON THE MISSING

NATIONAL INFORMATION EXCHANGE MODEL

NIEM.gov

Within a **four mile radius** of Amber's abduction, there were:

**38** TV stations

**34** FM stations

**12** AM stations

If **Amber Alerts** had been in place when Amber was abducted, perhaps the outcome would have been different.

“What if we could send out child abduction alerts the same way we send out weather or traffic alerts?”

How can you CONNECT communities, locally and nationally, to *save children's lives*?

# NIEM IMPACT ON THE MISSING

Before NIEM, there was no national standard for **connecting communities**, locally or nationally, to exchange this kind of information.

Now, NIEM's AMBER Alert Information Exchange Package (IEPD) improves the sharing of Amber Alerts between jurisdictions and across multiple communications networks and technologies.
